Summary	5

Consumers' attitudes and behavior shifted in recent years. With the advance of technology, people can shop and order services online and mostly want to be satisfied instantaneously. That's why on-demand startups are so popular nowadays, and a successful on-demand mobile app development might become your jackpot ticket.

Just look at some **on-demand business facts**.

To understand how to start an on-demand business app, let us see what the world's top businesses offer to make it big.

Features, Advantages, and benefits of the Uber platform

Book a ride		
Platform Features	Advantages	Benefits
The pick up location The drop location The type of vehicle the user wants to select The time and date, in the case of the book, later feature	Users can quickly get their rides and travel with ease from one place to another. With the book later feature, users can easily book their rides for a future trip.	Convenient to travel For the user Easy for Driver to locate the passenger
Real-time tracking of driver		
Platform Features	Advantages	Benefits
The feature will enable the users to track the driver's location and how he is traveling.	When users are in the unknown regarding their driver, they feel very frustrated. This can lower the user's satisfaction level and also affect their overall experience of traveling.	Users know the exact location of the driver and track the time taken to travel Easy for drivers to locate a passenger

Allow others to follow ride in real-time		
Platform Features	Advantages	Benefits
Allow someone else to keep an eye on the route taken by the driver, and also let someone know if you have reached home safely or not.	Safety comes first for any person, and the riders always feel safe when they can share their ride details with someone close to them.	Life becomes easy and secure for the rider as a result.
Multiple payment options		
Platform Features	Advantages	Benefits
allow the user to opt for prepaid and post-paid rides	Can allow payment via cash, card, pre-paid wallets, or any other mode.	Convenient to pay based on the situation
Multiple drops off points		
Platform Features	Advantages	Benefits
allow the user to opt for multiple drop locations along the route.	When you are booking your ride, make sure to add the multiple stops that the driver will have to make along the route. This can be added to the destination itself.	Great feature while more than one person is traveling on the same route.

In-app chat and call		
Platform Features	Advantages	Benefits
The in-app chat or call feature helps you to connect with the driver or support team.	User can connect with the driver to know their whereabouts or to direct them. In some cases, the user would want to chat with the support team.	Life becomes easy and secure for the rider as a result.
Trip history		
Platform Features	Advantages	Benefits
Shows history of previous rides(completed, cancelled, payment issues, etc)	Users can view previous rides and save destination	Very useful for frequent travelers to check and keep track.

Developing an on-demand business is not an easy task. You need to decide the target audience, build the business model, and onboard service providers for your app based on the app idea and the segment you are planning to cater to. Visit the previous chapters' PDFs

Apart from defining the plan and the strategy and the ultimate goal of the app, you ought to have the best of the features for the platform for you to become successful.

Technology stack for successful on-demand business

An essential step in planning your on-demand business is deciding on the technology stack as it grows the future of your project and its [scalability](#).

On-demand apps link the service and goods providers with potential customers and retain loyal clients. Nowadays, people are accustomed to using their smartphones daily for a lot of tasks. Thus, good experience on mobile apps plays a significant role in bringing in customer satisfaction and helps them stay glued to the app when a particular service is needed. To ensure a great user experience, some basic features should be an integral part of guaranteeing future startup success..

Convenience

The overall app performance, intuitive user interface, speed, the order in a minimum number of clicks, simple login, easy check-out processes, etc. Real-time tracking. The idea of tracking the order or service brings in a high level of satisfaction and long-term customer loyalty. Consider adding this feature when you create your on-demand app.

Maps

Maps integration into the app can solve three problems at a time:

Geolocation — when a user places an order, the system finds out their location, and through

Personalization helps to prompt the best options for the customer nearby. Besides,

Easy Payments

Based on your target audience, you should consider payment integrations. For instance, Stripe is famous in the USA by Lyft, Postmates, Instacart, and TaskRabbit. Cashless payments are popular in some parts of the world and are still in the infancy stages in some countries. Uber eats, an on-demand food delivery app, lets users pay by cash, card, or pre-paid wallets. Another popular feature uber provides is splitting payments. If your on-demand idea allows for it, you can give this for customer convenience.

Ratings and reviews

Consumers today trust the feedback of fellow customers. They read and trust the opinion of other customers. You can collect ratings and reviews for the offering and the app. This feedback will help improve your product or service and give customers a choice to choose the best.

The list of wanted features is many, but as we continue the discussion, we have to focus on one of the earliest questions that crop up in the discussion: Should you build it from scratch or rely on white-label mobile app development.

The decision is quite a brain scratcher since both types of app development have their own advantage and disadvantage. It is easy to understand which app development type can bring better outcomes for your business venture when you read through the factors.

To make things easier for you, we have gathered information upon factors that you should look at to make the right decision.

Difference between a White Label App and Custom Mobile App

3 Main differences between White Label Chat App and Custom Mobile App:

Cost

Cost is something that every company or businessmen take into consideration at the beginning of their venture. Similarly when there is a requirement for an app people usually look for the most cost-effective solution.

Custom apps are built from scratch including latest interactive User Interfaces, layouts and much more. Therefore the resulting product costs high.

White-label apps, on the other hand, are pre-made with a certain set of regular and most important features with room for customisation according to the buyer. And, therefore, as it is pre-built the cost is usually less than a custom app.

App Development Time

In terms of time needed to build and launch the app, Custom Mobile Apps take more time than white-label apps. It is because Custom Apps are built from scratch. This, therefore, requires time for trial and testing.

On the other hand, white-label messaging apps are half ready awaiting the last finishing touches. When any business opts for a White label app, for example, a white-label chat app, the basic functionalities are already present. Thereafter changes or customisation are made as per the requirements of the buyer.

Hence, opting for a white-label app will help to keep your app launch faster in the market.

Skillset and Maintenance

Into own a White label app, businesses do not need an extra set of skilled personnel to install, run or manage that app. There is no requirement for any other app development once you receive your white label app. Any request for changes can be put up with the parent company, the ones who developed the app. This therefor leaves businesses with no room for worries.

In a custom app, a team of skilled app developers seem to be a constant requirement. Along with changes the developer's team has to look after the app maintenance.

.

You can choose a White-label App if below reasons match your requirements

01

Low budget- White label apps are branded and customized to suit your need, while the initial cost is substantially lower when compared to custom development..

Customization- White label mobile applications are customized to reflect your brand identity. It proves effective as the customer will have a good recall of your brand and stay loyal to it.

02

03

Quick turnaround time- White label software helps you be ready to launch right from the start. Shorter time to market makes white label solutions an excellent solution for businesses to offer services as quickly as possible.

Quick turnaround time- White label software helps you be ready to launch right from the start. Shorter time to market makes white label solutions an excellent solution for businesses to offer services as quickly as possible.

04

05

360-degree solution: It can be quite complex to build software connecting the user, admin, and service provider. Many businesses, such as food delivery and ride-hailing services, face this common problem. A white label software can take care of that instantly.

The size and rapid growth of the on-demand economy clearly shows that consumers are attracted by the user experience, added convenience and other benefits it provides. The data also shows on-demand services have already moved beyond early adopters and are gaining traction among mainstream consumers who require that platforms to be user-friendly and safe.

Like all major tech disruptions, on-demand startups are now challenging industry incumbents with cutting-edge technology, new business models, and finding innovative ways of engaging customers. Existing on-demand businesses will need to embrace the change and transform their tech, service, and delivery systems to meet growing consumer expectations. Before starting a new business, you have to make sure you choose suitable service delivery systems and ensure they are accessible, secure, and mobile-friendly while leveraging the potential pool of providers who would like to participate in the on-demand economy.
